

N■VUU MEDSPA

Pre & Post Care Instructions

Neurotoxin (Botox / Dysport / Daxxify / Xeomin)

PRE-TREATMENT

- Avoid alcohol for at least 24 hours before your appointment
- Avoid blood-thinning medications and supplements (aspirin, ibuprofen, fish oil, vitamin E, ginkgo biloba) for 3 days prior, if medically safe to do so
- Arrive with a clean face, free of makeup (we have makeup wipes & face wash at the office if needed)
- Avoid scheduling your appointment within 2 weeks before a major event
- Inform your provider of any medications, supplements, or medical conditions

POST-TREATMENT

- Do not rub, massage, or apply pressure to treated areas for 24 hours
- Stay upright for at least 4 hours after treatment
- Avoid strenuous exercise for 24 hours
- Avoid heat exposure (saunas, hot tubs, hot yoga) for 24 hours
- Avoid alcohol for 24 hours
- Do not receive facials, massages or laser treatments for 24 hours
- Full results after 2 week, if you feel like you need a touch up, please call our office to schedule between the 2-3 weeks post injection

Dermal Filler

PRE-TREATMENT

- Avoid alcohol for at least 24 hours before your appointment
- Avoid blood thinners and supplements (aspirin, ibuprofen, fish oil, vitamin E, ginkgo biloba) for 3 days prior, if medically safe to do so
- Stay well hydrated in the days leading up to your appointment
- Avoid scheduling within 1-2 months of a major event if possible
- Inform your provider of any history of cold sores if treating the lip area
- Arrive with a clean face, free of makeup (we have makeup wipes & face wash at the office if needed)

POST-TREATMENT

- Expect mild swelling, bruising, and tenderness for 14 days
- No makeup for 24 hours
- Avoid NSAIDS; Tylenol is ok
- Do not massage or apply pressure to treated areas unless specifically instructed
- Avoid strenuous exercise for 24 to 48 hours
- Avoid alcohol for 24 to 48 hours
- Avoid extreme heat or cold (saunas, hot tubs, ice packs directly on skin) for 48 hours
- Sleep on your back with your head slightly elevated for the 2 nights
- Avoid dental procedures, surgeries, vaccines for 2 weeks following filler
- Avoid laser treatments, facials, massages or face treatments for 2 weeks
- Final results are visible once swelling fully resolves, typically within 2 to 4 weeks
- Don't love it or hate it for 2 weeks!

Biostimulators (Radiesse)

PRE-TREATMENT

- Avoid alcohol for at least 24 to 48 hours before your appointment
- Avoid blood thinners and supplements (aspirin, ibuprofen, fish oil, vitamin E, ginkgo biloba) for 3 days prior, if medically safe to do so
- Stay well hydrated in the days leading up to your appointment
- Arrive with a clean face, free of makeup (we have makeup wipes & face wash at the office if needed)
- Inform your provider of any medications, supplements, or medical conditions

POST-TREATMENT

- You may have swelling, tenderness and bruising for 2 weeks post treatment
- Do not massage treated areas unless instructed by your provider
- Avoid NSAIDS; Tylenol is ok
- Avoid strenuous exercise for 48 hours
- Avoid alcohol for 24 hours
- Avoid extreme heat (saunas, steam rooms, hot yoga) for 48 hours
- Results develop gradually over 4 to 12 weeks as collagen production is stimulated
- A series of treatments may be recommended for optimal results

Microneedling

PRE-TREATMENT

- Avoid retinoids (tretinoin, retinol) for 5 to 7 days before treatment
- Avoid blood thinners and supplements (aspirin, ibuprofen, fish oil, vitamin E) for 3 days prior, if medically safe to do so
- Avoid active skin infections/ irritation, open wounds, sunburn or severe breakouts in the treatment area- call us to reschedule
- Avoid sun exposure and tanning for at least 2 weeks before treatment
- Do not use exfoliating acids (AHA, BHA, glycolic) for 3 days prior
- Arrive with a clean face, free of makeup (we have makeup wipes & face wash at the office if needed)
- Stay well hydrated leading up to your appointment
- Inform your provider of any history of cold sores or keloid scarring

POST-TREATMENT

- Skin will appear red and feel similar to a mild sunburn for 24 to 72 hours; this is normal
- Change your pillowcase
- Do not wash your face or apply any products for at least 4 to 6 hours post-treatment (if you get microneedling with PRF or VAMP, please wait 12-24 hours before washing your face)
- You will be given a topical skin hydrator at your appointment to use for the first 24 hours. We do not recommend any other products to be used
- Avoid retinoids, exfoliating acids, and active skincare ingredients for 7 days until your skin is healed
- Avoid direct sun exposure and wear SPF 30 or higher daily (after 24 hours)
- Avoid strenuous exercise, sweating, and heat exposure for 24 to 48 hours
- You may experience some peeling day 3-5, do NOT pick any flaking skin
- Results improve progressively; optimal results are typically seen after a series of 3 treatments spaced 4 to 6 weeks apart

PRF Ez Gel

PRE-TREATMENT

- Stay well hydrated and eat a balanced, nutrient-rich meal before your appointment; the quality of your PRF is directly influenced by the quality of your blood, so proper hydration and nutrition in the days leading up to your treatment will support optimal results
- Avoid alcohol for at least 24 to 48 hours before your appointment
- Avoid blood-thinning and anti-inflammatory medications (aspirin, ibuprofen, fish oil, vitamin E, ginkgo biloba) for 3 days prior, if medically safe to do so
- Stay well hydrated in the 48 hours leading up to your appointment
- Arrive with a clean face, free of makeup (we have makeup wipes & face wash at the office if needed)
- Avoid scheduling within 2 weeks of a major event
- Inform your provider of any medications, supplements, or medical conditions

POST-TREATMENT

- EXPECT swelling, redness, and possible bruising for 3 to 5 days; this is normal and part of the healing process. Please plan special events accordingly
- Avoid anti-inflammatory medications (NSAIDs, Advil, Aspirin), ice and Arnica- as these can suppress the regenerative process. Tylenol is ok
- Avoid touching, rubbing, or massaging the treated area for 24 hours
- Avoid strenuous exercise and excessive sweating for 48 hours
- Avoid alcohol for 24 to 48 hours
- Avoid extreme heat (saunas, steam rooms, hot yoga) for 48 to 72 hours
- No makeup in the treatment area for 24 hours
- Avoid laser treatments, chemical peels, or microneedling for 1 week
- Results develop gradually over 4 to 12 weeks as your body produces new collagen and elastin
- A series of 3 treatments spaced out 4-6 weeks apart is usually recommended for optimal results

VI Chemical Peel

PRE-TREATMENT

- Avoid retinoids (tretinoin, retinol) for 5 to 7 days before your peel
- Avoid exfoliating acids (AHA, BHA, glycolic, salicylic) for 5 to 7 days prior
- Avoid waxing, threading, or laser treatments on the face for at least 2 weeks before your peel
- Avoid prolonged sun exposure and tanning for at least 2 weeks before treatment; arrive without a sunburn
- Discontinue use of any prescription topicals unless advised otherwise by your provider
- Arrive with a clean face, free of makeup (we have makeup wipes & face wash at the office if needed)
- Inform your provider of any history of cold sores; antiviral prophylaxis may be recommended
- Inform your provider of any current medications, especially Accutane (you must be off Accutane for at least 6 months before receiving a chemical peel)

POST-TREATMENT

- Leave the peel solution on for the time instructed by your provider; do not wash your face early
- Peeling typically begins on days 2 to 3 and can last through day 7; this is expected and normal
- Do not pick, pull, or peel flaking skin; allow it to shed naturally to avoid scarring or hyperpigmentation
- Use only the post-peel kit products provided; do not introduce any other skincare during the healing period
- Avoid direct sun exposure entirely during the peeling phase; wear SPF 30 or higher every day once healed
- Avoid strenuous exercise and sweating for the first 48 hours
- Avoid alcohol for 24 to 48 hours
- Avoid retinoids, exfoliating acids, and active skincare for at least 7 to 10 days post-peel
- Avoid laser treatments, microneedling, or waxing for 4 weeks
- Avoid swimming pools and hot tubs during the healing process
- Final results are visible once peeling is complete, typically within 7 to 10 days; skin will appear brighter, smoother, and more even in tone

Frequently Asked Questions

Neurotoxin

How long will my results last?

Tox results can vary from person to person, but on average you can expect your treatment to last 3-4 months, and you can expect results to peak at around 6-8 weeks.

How quickly will I notice a difference?

Neurotoxins take up to 14 days to fully settle, but you may begin to feel the effects in as little as 24 hours.

What if I need more units?

Please schedule a follow up appointment after getting tox between 2-3 weeks after your treatment so that we can assess your movement & perform a dosage adjustment as needed.

How many units will I need?

Everyone's anatomy is different, and everyone has different aesthetic goals! A general rule of thumb is around 20 units for each of the upper facial muscles (forehead, "eleven lines", and "Crow's Feet").

Dermal Filler

Am I going to swell/bruise?

Dermal fillers are introduced into the body via a needle or cannula, and because of this mild trauma most people can expect bruising and swelling to some degree.

How long will I be swollen/bruised for?

The extent of your bruising and/or swelling is unique to you, but most people are able to resume regular daily activities after 24-48 hours. Arnica gel and Tylenol will be provided to you after your appointment, along with some aftercare do's and don'ts to ensure safe and healthy healing.

How long will my results last?

Dermal fillers tend to last between 6-18 months! It depends on location and amount of the filler

How many syringes will I need?

That is entirely dependent on your current anatomy and what your aesthetic goals are! You and your provider will come up with a treatment plan together so that we can help you achieve the look that you are going for.

Can I pay for a half syringe?

While we do not offer half syringes, we will keep any leftover filler from your syringe for 2 weeks. After two weeks, you will come in for a follow up appointment, and any remaining filler from your syringes can be used.

What if I don't like my results?

The good news is that dermal fillers are long-lasting but temporary. You can either wait for your body to naturally metabolize the dermal filler, or you can come in to have it dissolved with a special filler dissolving agent.

Microneedling

What does microneedling do?

Microneedling creates channels in the skin via controlled damage using sterile needles. These channels allow for skincare products to penetrate deeply into the skin, and signal to the body to produce more collagen in that area. Collagen is a foundational building block of the skin, and more collagen creates tighter, firmer, more supple skin.

What is a good candidate for microneedling?

Microneedling works for all skin types! Microneedling should be avoided by people that are pregnant or breastfeeding, and those with active acne.

How many sessions will I need?

We typically recommend a series of three treatments, spaced 4-6 weeks apart. After this series is completed, you can maintain your results with a treatment every 3-4 months!

When can I resume regular activity after treatment?

After microneedling, you may be red and mildly swollen. However, most patients are able to resume regular activity within 24 hours post treatment.

Does microneedling hurt?

Microneedling can be a little uncomfortable or "spicy" at times, but we offer a luxurious pre-treatment facial massage and numbing cream. Most patients report little to no pain during the procedure.

Chemical Peels

What is a chemical peel?

A chemical peel consists of skin-friendly chemicals that are expertly applied to your skin that chemically exfoliate the outer layer of your skin.

What are chemical peels good for?

Chemical peels can treat a wide variety of skin conditions! They can treat fine lines and wrinkles, post-inflammatory hyperpigmentation (PIH), acne scarring, uneven skin tone, and dullness. Talk to your provider about what your aesthetic goals are.

Do chemical peels hurt?

Not at all! Chemical peels are a completely painless procedure.

What is the down time like?

After your chemical peel, you will typically begin to peel around day 3 and typically be finished around day 7. The severity of how much you peel depends on the prior condition of your skin and if you regularly use retinoids and/or skin active ingredients.

IV Hydration

What are IVs for?

An IV can be great for replenishing and rebalancing electrolytes, helping soothe migraines, helping with body aches, helping with nausea, boost immunity before travel, and cut colds short!

How long does a session take?

Most IV drips take between 30 and 40 minutes, depending on the blend selected. You can relax comfortably during your session in our luxurious IV lounge, making it an easy addition to your self-care routine.

What can IV hydration help with?

IV hydration can support a wide range of goals and concerns, including fatigue and low energy, dehydration, immune support, hangover recovery, brain fog, athletic recovery, skin health and glow, jet lag, and general wellness maintenance.

Are there any contraindications?

Certain medical conditions such as kidney disease, heart failure, or fluid-sensitive conditions may make IV hydration inappropriate. This is why we complete a thorough health history review before every session. If you have questions about whether it is right for you, feel free to reach out before booking.

Who is a good candidate for IV hydration?

IV hydration is a great option for busy professionals, athletes, frequent travelers, those feeling run down or under the weather, or anyone looking to optimize their overall wellness. A brief health intake is completed prior to your first session to confirm it is appropriate for you.
